For those who own a Western version of the game, Square Enix has confirmed that this trainer is compatible with Western versions of the game. Also worth noting is that the 3rd Party trainer is still needed to continue on with the trainer. Hitman Absolution is an expansion pack for Hitman: Absolution. It will only work if Hitman Absolution is installed, and will automatically download and install the data from it if you have that game installed. If you do not have Hitman: Absolution installed, you can use the data from this data pack instead. The data pack contains Hitman Absolution assets, along with additional content in Agent 47's file, The Contract, which can be used to create mods for Absolution. The most recent update to the data pack is dated July 23, 2013. I haven't played this game, but I have just gotten Hitman: Absolution on Steam for Windows 7. I signed up for this Community but didn't know what to do. I was browsing around and I saw this. I hope you guys can help me get rid of that damn trainer so I can play! Thanks in advance. I got the same problem as being described in post #16 's comment, the game crashing after enabling the trainer. After saving, restarting the game everything is ok. I'm using version 1.0.441.0 of the game. I got the same problem as being described in post #16 's comment, the game crashing after enabling the trainer. 29 years ago, I was thinking how to search for online videos, and I was creating a sandbox where I could do all sorts of searches, and load the videos into my project and view them within Flash in real-time. And it was going well, but there was one big problem I couldn't solve. If you were to try to embed a video from YouTube into your site, it would only embed the first three seconds, and then stop. And even if you had video from Vimeo you

couldn't really do anything with it. So I set out to solve the problem. And my aim was to make an online video player, that will enable people to search for videos on the Internet and view them as if they were watching them on a computer. And here it is.
