What It Does: The Basic Eraser functions a lot like the brush tool. You can change the size and hardness of the eraser tip to achieve a variety of effects, like blending and fades. The Background Eraser uses differences in color to help you erase unwanted background areas from your images. One tiny angle in the Fill tool that is very useful: You can use a custom color instead of any of the other 50,000 colors available in the built-in color wheel. So if you have a specific color you want to use and don't often find it, you can use that color for any solid area. Furthermore, you can alter the transparency of your fill. For example, if you have a solid yellow background and you want to create a gradient that fades from the top to the bottom of the image, you can use the Gradient tool. Click once to select a color; then drag from the top of the image to the bottom, and Photoshop will add the matching color at every point you drag the gradient across the image. The other point of interest in here is the blending options; you can choose between Normal, Multiply, or Screen blending. 933d7f57e6
